

Adquio APP Builder

Your control app,
without writing code

Product: Adquio APP Builder

Category: ADQUIO · SERVICES

DESCRIPTION

Adquio APP Builder creates web and mobile interfaces through configuration. Organise installation controls with icons, sliders, calendars and charts, and apply the visual identity your project needs.

The configuration connects to Adquio.API and is used on web, Android and iOS. Apps download the user interface and access controller variables through the cloud, with permissions and action records.

BENEFITS

**No
coding**

Define the interface through configuration rather than developing an app from scratch.

**Personalised
design**

Choose groups, colours, icons and clear names to present the controls each user needs.

**Web, Android
and iOS**

Use one interface definition in a browser and on compatible phones and tablets.

**Versioned
configuration**

The app detects new configuration versions and allows downloading and replacing the local interface.

**Permissions
and auditing**

Manage user actions and retain records of who acted, on which variable and when.

TYPICAL APPLICATIONS

**Smart
Homes**

Organise lighting, HVAC, blinds and scenes in one app.

**Offices
and retail**

Present zones, floors and schedules with project branding.

**Hotels
and guests**

Adapt the interface to the controls each room needs.

**Industry
and energy**

Display variables and charts from integrated systems.

**System
integrators**

Reuse a configuration approach across deployments.

**Users with
permissions**

Provide controls and actions suited to each authorised profile.

Is this product or service part of your project?

Contact us and we will prepare a proposal for your installation.

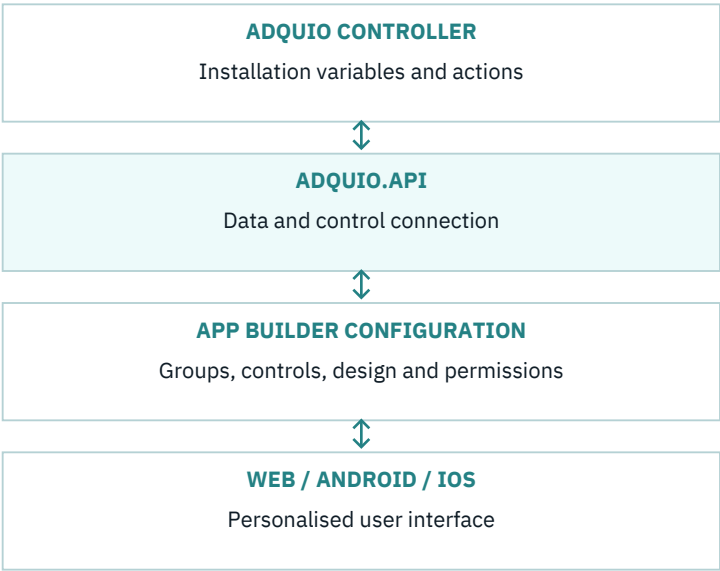

WHEN TO CHOOSE ADQUIO APP BUILDER?

Adquio APP Builder creates web and mobile interfaces through configuration. Organise installation controls with icons, sliders, calendars and charts, and apply the visual identity your project needs.

Scenarios where it adds value:

- **You need an app without developing code**
Define controls and organisation through Builder configuration.
- **The customer uses several device types**
Offer the interface on web, Android and iOS for compatible devices.
- **You want customer branding**
Configure colours, icons, names and groups for a personalised experience.
- **The interface must change with the installation**
Use versioned configurations that the app can detect and update.
- **You need variable control and visualisation**
Combine controls, sliders, calendars and charts connected to Adquio.API.
- **It matters who performs each action**
Configure permissions and use audit records by user and variable.

TYPICAL ARCHITECTURE

Requires available controller variables and Adquio.API connectivity.
The technical code of each variable must remain consistent with the application configuration.
