

# Adquio Cloud BMS

Control and analysis from the web

**Product: Adquio Cloud BMS**

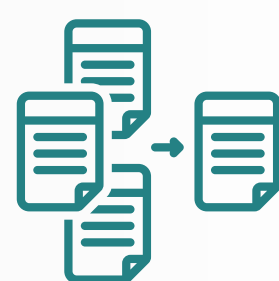

**Category: ADQUIO · MONITORING AND CONTROL**

## DESCRIPTION

Adquio Cloud BMS brings the data from one or more installations together on a web platform for remote monitoring and control. It provides real-time status views, historical charts and report generation, with configurable SCADA-style screens for each building.

Monitor and manage each installation from anywhere, without having to travel to the building.

## FUNCTIONS

### Unified management

Brings data from multiple buildings together on one platform, so you can check the status of each installation without switching systems.

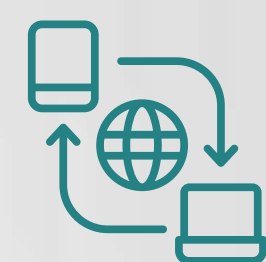

### Real time

Check the current status of equipment and act remotely on the available systems.

### Data and reports

Review historical charts to track trends and create interactive, automated reports for analysis.

### Remote access

Access one or more installations from a web browser without having to travel to each building.

### Secure connection

Encrypted connections, user roles and two-factor authentication protect your information.

## WHO IS IT FOR

### Building managers

Owners and managers of one or more properties who monitor their status and coordinate operations.

### Technical maintenance

Teams that review alarms and historical data to prioritise tasks and plan maintenance.

### Integrators

Professionals who connect building systems and bring their data together on shared screens.

### Control room operators

Personnel who monitor current data and operate systems from SCADA screens in a control room.

### Energy managers

Professionals who review energy data and building conditions to compare trends over time.

### Technical services

Teams involved in design, commissioning or day-to-day maintenance.

WHEN TO CHOOSE CLOUD BMS

View and control one or more installations from the web, with current data, historical charts and interactive reports. SCADA-style screens bring the building systems together so you can understand their status and act remotely. Adquio Cloud BMS is right for you if you need any of these features:

- **Centralised monitoring**  
Bring multiple installations together on a single web platform to check the status of each building in an organised way, without switching between independent systems.
- **Real-time data**  
Check current values and the status of connected equipment. From the platform, you can also act remotely on the available systems.
- **SCADA-style control**  
Visualise and manage HVAC, lighting, energy, occupancy and air quality through graphical screens adapted to each installation.
- **Historical data and reports**  
Review charts and tables to see how data evolves. Create interactive, automated reports to help analyse performance.
- **Access and security**  
Access the system from the web through encrypted connections and organise permissions with user roles, so each person has the appropriate level of access.
- **Customisation**  
Configure the platform display and scope according to the project requirements and the number of installations you want to manage.

INSTALLATION INTEGRATION
